APPLICATIONS NOTE Data Cables For Timing Systems

Larus timing systems such as STS 5400 and STS 5800 bear two RS-232 data ports for local or remote access by the user. Larus offers different ancillary cables to make these connections.

Larus Part Number	Purpose	Diagram
041-02006-000	timing to VT100 terminal	A
041-02007-000	timing to PC 9-pin serial port	B
041-02008-000	timing to external modem	C

In each cable, at the timing system ended 25 pin connector, there is a clip that will allow the user to lock on or unlock from the shelf connector. Further, on each cable, there is a permanent label to mark which end goes to what equipment, as listed above, plus the Larus part number.
