NOTICE!

End of Lifecycle for CXR 5200

Dear CXR/Larus Customer,

Effective June 30, 2006, CXR/Larus will no longer service, repair or calibrate the CXR 5200 test set.

The CXR 5200 was Manufacture Discontinued (MD) as a production unit in 1995. CXR Larus has continued to service the 5200 beyond the normal lifecycle period, but many components are “no longer available” (NLA), therefore, continued service, repair and calibration is no longer viable.

The CXR 5200 has been replaced by the CXR/Larus- Halcyon 704A-NTS1, which is a compact, portable unit which contains all the features of the CXR 5200 test set, and is also battery powered with a smaller form factor.

CXR/Larus will offer your company generous trade-in discounts for CXR 5200 units toward purchase of the Halcyon 704A-NTS1 Universal Services Test Set. This popular unit features Analog narrowband & broadband TIMS, Signaling, DDS and T1 capabilities, and has been standardized at every major US Telco, the FAA, GSA and a host of governmental agencies.

To receive additional information and/or a quotation, please call us at 800.999.9946 and ask for the National Support Center (NSC).

Yours Truly,

Larry Taillie, President
CXR/Larus
